

Rain Gardens

The key to managing your stormwater and protecting Puget Sound

FREE WORKSHOPS

Advance registration is required. Please call (360) 867-2166 or email nativeplantsalvage@gmail.com

WHEN & WHERE

April 1 Yelm
April 15 Tumwater

Thursday evenings
6:30 - 8:45pm

Soak up rainwater from downspouts, driveways, and sidewalks!

Puget Sound
Starts Here

WHAT IS A RAIN GARDEN?

A rain garden is a shallow depression in a yard planted with a variety of flowers, shrubs and grasses that "don't mind getting their feet wet." Learn how rain gardens help soak up rainwater from downspouts, driveways, and sidewalks, while protecting our local waterways. When planted with the right types of plants, rain gardens also attract birds, butterflies and bees.

AT THE WORKSHOP

You'll receive a FREE rain garden manual and additional materials. Learn your soil type during the class! There will be opportunities to gain further hands-on experience by helping create rain gardens later in the spring and fall.

PARTNERS

Thurston County Stream Team, Tumwater Stream Team, WSU Extension's Native Plant Salvage Project, and Stewardship Partners.
